Global Food Technology Environmental Policy

Rev: 26/09/2022

Global Food Technology Ltd is committed to minimising the impact of its activities on the environment.

The key points of its strategy to achieve this are:

- Minimise waste by evaluating operations and ensuring they are as efficient as possible. Most of our waste is created through packaging and printing. Employers should therefore:
 - Reuse and recycle product packaging
 - Encourage our suppliers to use recyclable packaging materials
 - Only print documents that require a hard copy e.g. Consignment notes (Goal = paperless office)
 - Marketing materials to be shared electronically where possible
- Minimise toxic emissions through the selection and use our fleet and travel arrangements
 - By the end of 2023 all diesel vehicles will be replaced
 - Employees are encouraged to use video conferencing for customer and supplier meetings instead of face to face meeting
 - Car sharing should be used where ever possible
 - Public transport should always be considered for journeys
 - Purchase 'green offsetting' where offered for travel
- Actively promote recycling both internally and amongst its customers and suppliers.
- Source and promote a product range to minimise environmental impact
- Investigate the use of an accredited program to offset the greenhouse gas emissions generated by our activities.
